kept in the inner room, and are tied on the necks of certain buffaloes for a short time on special occasions. The other bells, called *kudrs mani*, are kept outside the door of the dairy and are put on the necks of the *punir* on the same occasions. 234 778

There were several points of interest about the lamps used to light the dairies. At one time it seems that every *palol* was provided with an iron lamp with a number of cavities, each cavity being fitted with a wick. These lamps are reputed to have been as old as the foundation of the *ti* dairies. One of the lamps which is still in existence at the Nòdrs *ti* (that of the *warspoh*) is said to have been brought from Amnòdr. There is some doubt about the exact number of cavities and wicks in these lamps, but in the existing lamp of the Nòdrs *ti* there seems to be little doubt that there are seven cavities and wicks, and the lamp is called *önavpelk*, "the lamp of the seven holes." All the seven wicks are only lighted on special occasions (*ponnol*), and on most days only one is used. At some dairies these iron lamps have been long lost, and in these cases the *palol* used to make lamps of the bark of the *tudr* tree. According to Marshall (p. 141), these lamps have five wicks, and this appears to be still the case at the Kars *ti*, where there were formerly two iron lamps, one with five cavities and one with four, and in the lamp now used at this *ti* they still keep up the use of five wicks on special occasions, using only two on ordinary days. It is possible that Marshall derived his information from a man who had been *palol* at this *ti*. At one of the dairies of the Pan *ti* there is an old iron lamp with seven cavities, and at the other, where a bark lamp is used, it has three wicks. At the present time the dairymen rarely trouble to make bark lamps, but are content with earthenware lamps procured from the bazaar. If these are broken and cannot be replaced at once, bark lamps are used during the interval. The wicks of the lamps, for whichever lamp they may be used, are always made of *tuni* taken from the garments worn by the *palol*, and the substance used in the lamps is butter. 234 354 [314] [177]

Of the two fireplaces in the outer room, the *tòraithwaskal* is used for ordinary purposes, for cooking food, &c. The

184 234 618 554 the Kars and the Pan *ti* the people of Kars are *mòrol*, but they may only visit the *ti* and take buttermilk and are not allowed to sleep there, nor have they any of the special ceremonial duties of the Melgarsol.

234 463 554 [358] When the dairy of a *ti mad* needs to be repaired or rebuilt, this is done by Melgars men, who must previously undergo an ordination ceremony of the same character as that for the office of *wursol*, and the men rank as *wursol* while engaged in the work. The hut of the *ti mad* is also repaired or rebuilt by the Melgarsol, but in this case the work is done without any special ceremony. In either case the Melgars men are not allowed to leave the *ti mad*, and they sleep in the living hut while the work is being done.

[764] Another duty of the Melgarsol is to assist in carrying the corpse of a *palol* who has died in office.

[123] On the occasion of the *teutütusthchi* ceremony in 1902, when the *palol* and *kaltmokh* left the dairy at Mòdr for several hours, I found a Melgars man in the neighbourhood of the dairy, and it seemed to me that he was watching the dairy while the regular guardians were away. I was told however, that this was not one of the recognised duties of a *mòrol*, and I suspected that he was stationed at Mòdr at the time of my visit, because it was feared that I might take advantage of the absence of the *palol* to make a closer inspection of the dairy than was allowed.

New Dairy Vessels

415 437 439 The earthenware vessels of the inner room (*persin* and *tòrzum*) are procured from Hindus through the Badagas. They were formerly obtained from a place called Kulpet (Kundapeta), near Nanjankudi in Mysore, and I was told that the Todas used to go down to fetch them.

The earthenware vessels of the outer room (*alug*) are obtained from the Kotas like those of the ordinary dairy. 234 314 The churn or *kòghlag* is made by the Todas themselves from the slender bamboo growing on the hills.

322 415 The material out of which the bamboo vessels (*kwoi*, *idrkwoi*, *karpun*, *uppun*) are made, is procured from a place

1: Rivers E-5 (ca. 1901-02) 1906 Toda

called Ebenput (?) near Musinigudi. When new vessels are required, and there is only one *kaltmokh*, a second is appointed, who goes to Ebenput, where he cuts bamboo called *kôli*, which is large enough for the dairy vessels. The bamboo is taken by the *kaltmokh* to the *ti*, and the new vessels are manufactured by the *palol*.

234 314 322 415 793

It is possible for the *kaltmokh* to go to Ebenput and back in one day, but if unable to do this he may stay the night at Taradr, the nearest *etudmad* to Musinigudi. The bamboo for the new vessels, however, must not be taken to Taradr, but must be left in a wood near the village, and taken on to the *ti mad* on the following day.

Any new vessels or implements must be purified before being used. The earthenware vessels of the inner room are taken from the Badagas who bring them, and are rubbed over, inside and out, with the bark of the *tudr* tree, after which the bark is put inside the vessel, water is poured in three times, saying "*Oñ*," and the contents rinsed round and poured out. Water is then put in the vessel, which is placed for a time on the fireplace to make it look old, the fireplace used being the *pelkkatitthwaskal*. The *kòghlag* or churning stick is purified by rubbing *tudr* bark over it and pouring water all over it three times. The churning stick and the earthenware vessels of the inner room are both purified in the outer room of the dairy, and the purification must be performed on a Sunday.

234 412 415 783

The *kwoi* is purified on the same day of the week in front of the buffalo enclosure or *tu*. After churning, the *palol* takes the new *kwoi*, and a *tòrsum* full of water, and purifies the former with *tudr* bark and water three times in the way already described. He then milks into the new *kwoi* for the first time, and on this occasion he must be careful not to fill the vessel completely.

The *idrkwoi* is purified in the same manner as the other vessels and also on a Sunday, but the purification is performed at the junction of the inner and outer rooms of the dairy.

New vessels and other objects belonging to the outer room are purified with the same procedure in their own room, but on a Tuesday or Wednesday.

1: Rivers E-5 (ca. 1901-02) 1906 Toda

234x 292 793 ordinarily called *pennar*, but is now called *kerk*, and this part of the ceremony is called *kerkatiti*. The fact that this name is given seems to indicate that properly the complete garment should not be given till a later stage of the proceedings.

234x 793 The candidate then finds seven leaves called *muliers* and seven shoots or *nan* of the same plant and goes through exactly the same ceremony at the stream as in the ordination of *palikartmokh*, putting the shoots in his back hair at the end. This part of the ceremony is called *mulinirȯditi*, and its object is to make the candidate a *palikartmokh* as a step towards becoming *wursol*. He is taken through the lower degree on his way to the higher.

[372] After *mulinirȯditi* the candidate goes to the wall of the dairy and stands outside it. The *palikartmokh* brings a firebrand from the dairy and lights with it a fire of *muli* wood, at which the candidate warms himself. The firebrand must be one of the three following kinds—*kid*, *pasȯr* or *kias*.

● [314] After warming himself, the candidate goes to fetch bark of the *tudr* tree, which must not be cut, but knocked off with a stone. He also brings seven perfect *tudr* leaves, and goes again to the dairy stream. He pounds the bark on a stone and dips it in water, squeezes the water into one of the *tudr* leaves, drinks, throws over his head and puts the bark on one side exactly in the same way as before, but using *tudr* bark and leaves instead of the shoots and leaves of *muli*. After doing this seven times he dips the pounded bark in water, sprinkles his head and face three times, puts the bark in his hair, and, going a little way off, shakes his head.

The candidate then goes again to find bark and leaves of *tudr*, and repeats the whole ceremony and continues to repeat it till he has done it seven times—*i.e.*, he drinks out of the *tudr* leaves seven times seven. After this he goes to the wood near the stream (at Kars, called Tarskars) and the *palikartmokh* comes to him there with the *ertatpun* filled with buttermilk, and with four leaves of the kind called *kakuders*. Two leaves are given to the candidate and two kept by the dairyman, and each folds the leaves in the usual way to make a cup (*ersteiti*). The dairyman then puts the *ertatpun* between his

1: Rivers E-5 (ca. 1901-02) 1906 Toda

Little use is made by the Todas of pigments. The juice of a fruit called *ilpom*, which has a red colour, is sometimes used to adorn the forehead, and another reddish juice from a fruit called *puthimulpom*[1] is used for the same purpose. The yellowish juice of the *pelkurthpom* is rubbed on the face, but this was said to be done in frosty weather only, as a protection against the cold. Ashes are now occasionally rubbed on the face and head, especially by women at the ceremony of going to the seclusion-hut after childbirth. The last is certainly a recently borrowed custom, and I suspect the other adornments just mentioned to be modern imitations of the forehead marks of the Hindus.

Ornaments

The men usually wear silver rings on the fourth digit of one or other hand. Often earrings are worn by the men and these are not uncommonly of gold. Harkness says that men sometimes wore chains of silver round the neck, but it is doubtful whether these are ever worn now. Formerly it seems that men used to wear far more solid rings, and one such ring is preserved which is said to have belonged to the hero or god Kwoten.

The ornaments of the women are more numerous and take the form of bracelets or bangles; armlets, often adorned with bunches of cowries; necklaces, sometimes made of silver coins; earrings; and a brass circlet worn round the waist. These ornaments are usually of brass or silver. At one time they seem to have been very massive, Breeks recording that a pair of brass armlets worn on one arm weighed six pounds. Formerly gold ornaments seem to have been commonly worn, and, so far as one can judge from older accounts and illustrations, it seems that Toda jewellery has greatly degenerated and is of a very paltry kind compared with that worn in the past.

[1] This is the fruit of one of the plants (*Rubus lasiocarpus*) of which the leaves are used in the ordination ceremonies of the dairymen of Taradr and Kanòdrs.
